BRIGHT because FL4SH features a vibrant and highly visible light source that literally frames each picture symbol in succession–making the process of tracking tiny LED lights seem all but archaic.

NEW because FL4SH incorporates automatic overlay detection – an innovative use of barcode technology that allows FL4SH to recognize individual overlays and adjust its output accordingly.

Unlike anything you've seen.

On the outside, FL4SH is sleek and contemporary. Its color-scheme says forward thinking, yet friendly.

FL4SH takes a novel approach to customizing every student's experience with an adjustable viewing angle that stays where it's put.

FL4SH can be activated by direct selection, with one or two switches, or by connecting one switch for each message location.

FL4SH boasts three scan modes, including Automatic Scan, Step Scan and Two-Switch Step Scan. Auditory scanning options are accessed by the touch of a button, with your choice of message, prompt or beep feedback.

And FL4SH's capacity to provide motivational visual feedback, via AbleNet's exclusive frame lighting feature, makes FL4SH a perfect fit for direct selectors and scanners alike.

FL4SH's included external messages jack allows students to access a series of sequential messages at any time. Like having a built-in Step-by-Step communicator, external messages offer even more possibilities for flexible communication from storytelling to social scripts to simply requesting another overlay.
For more information on Step-by-Step functionality, see page 20.

Different than anything you've experienced.

On the inside, this mid-tech device has remarkably intelligent features that belie its learning curve and its price tag.

FL4SH features a 4-step programming process that is easy to master and takes less than 5 minutes to complete – even when using it for the very first time.

FL4SH ships with twelve overlays and one 16-minute memory module that can be divided anyway you like – across one overlay, or dozens of overlays. Additional memory modules and overlays can be ordered at any time, making FL4SH infinitely expandable.

With FL4SH, the dream of automatic overlay detection is a reality. Durable plastic overlays are embedded with barcodes that tell FL4SH which overlay is in place. Your messages are always in sync without the hassle of levels, and color-coded stickers make matching overlays and memory modules fast and easy.

In short, FL4SH delivers limitless access to an infinite number of messages that can be changed on the fly–and that translates into more communication opportunities – each and every day.

FL4SH Fits.

Whether you're a special education professional looking for a scanning communicator that can be adapted to a variety of situations, both in and out of the classroom, or an AAC professional looking for a versatile assessment tool, FL4SH offers the functions you need and the features you want.

FL4SH Scanning Communicator includes:
- 1 FL4SH Scanning Communicator
- 1 Binder
- 1 Sixteen-minute memory module

## FL4SH Memory Module and Overlay Packets

Take advantage of FL4SH's automatic overlay detection with these additional Memory Module and Overlay Packets. Each packet includes an additional Memory Module, Overlay Sleeves, and color-coded labels. Build separate language libraries for home, school, and playtime. Drop in the appropriate overlays and their corresponding memory module at any time – FL4SH will adjust its output automatically. Available as an 8-minute module with 12 overlay sleeves, or a 16-minute, 24-overlay set.
