

## Bluebird II™ by Unlimiter Outstanding Voice Quality and Flexibility

Bluebird II represents a big step forward in digitized speech technology. With over 4 hours of clear, high quality recordings stored on a 256 Megabyte memory card, Bluebird offers the latest technology in an easy-to-use and affordable product.

Messages can easily be recorded into any of the 10 communication overlays in Bluebird II. Overlays are selected by flipping to the desired overlay and then pressing the numbered overlay button to the left of the keyboard.

Overlays on the Bluebird II contain 24 buttons in a 6x4 configuration as shown in the illustrations. If you need fewer and larger buttons, you can use the PMLS software (see facing page) to set up different keyboard configurations.

### Key Features

- > 10 levels (overlays)
- > Over 4 hours of high-quality recorded speech
